Define optional items only if desired. Define outlet fitting options (6-8) if they differ from inlet fitting options (2)(3). All fittings are not available in all sizes, and all fittings are not compatible with all pump sizes. Call for details. Operating pump in timer mode requires end-of-stroke detection to prevent over stroking. Operating a pump in timer mode without stroke detection voids the warranty. Operating pump without quick exhaust valves voids warranty. Customers may use NPT adapter and supply their own QEVs.

Performance

Reading Charts

Draw a horizontal line from your discharge pressure and a vertical line through your desired flow rate. At their intersection, estimate required air supply pressure, cycle rate and air consumption.

See green dashed lines in PXA030 and PXA060 charts for examples.

Example 1

At 2 Bar (30 psi) liquid discharge pressure and 60 psi supply pressure, PXA030 pumps provide 15 lpm (4 gpm) liquid flow rate. They would cycle at 210 CPM, and exhaust 13 SCFM of air.

Example 2

At 2 Bar (30 psi) liquid discharge pressure and 60 psi supply pressure, PXA060 pumps provide 30 lpm (8 gpm) flow rates. They would cycle at 220 CPM and exhaust 20 SCFM of air.

Improve Performance with Pulse Dampeners

In-line and top-mount dampeners reduce pulsation in fluid systems to improve flow control, increase batch yields, protect components, and minimize maintenance and downtime for repairs. DBA030 dampeners fit 30 and 60 lpm pumps. DBA060 dampeners fit 30, 60 and 140 lpm pumps. DBA140 dampeners fit 60 and 140 lpm pumps.
